

# Welcome to our ADC powerhouse at Pearl River, New York

Leverage 20+ years of Antibody Drug Conjugates (ADCs) innovation with a leading CMO, powered by Pfizer and backed by a world class manufacturing facility in Pearl River, NY.

As our ADC powerhouse, Pearl River specializes in the manufacturing of highly potent and cytotoxic bioconjugates. Powered by Pfizer and 100+ years of R&D and manufacturing experience, this state-of-the-art facility is ready to deliver the unwavering commitment to speed, scale and quality needed to advance your life-changing therapies to patients faster.

## Expertise in ADC progression

- A team of experienced scientists and decades of experience in ADCs
- A wealth of experience in scale-up of antibody and protein technologies
- Responsible for the world's first commercial-approved ADC product (Mylotarg™)
- A track record of outstanding safety performance, successful technical transfers and on-time delivery

## Time is life

Global network of scientists, regulatory experts and analytical and quality control engineers that help reduce:

- Wait times for manufacturing suite access
- Process scale-up time
- End-to-end process cycle time

## Capability and quality

- Cytotoxic compounds and drug substance intermediates
- Small-scale bacterial fermentation, recovery, and purification
- Conjugation reactions, chromatography, diafiltration, and formulation for bioconjugate development
- Small molecule chemistry capabilities for diverse therapeutic applications
- High-value formulations in a wide range of batch sizes
- The entire product flow path is single-use
- In-house QC labs for in-process, release and stability testing

## Regulatory intelligence for 150+ countries
