

Accelerating product
development with
intelligent collaboration

Wait, What? Pfizer can help with the early development of my hard-to-make molecule?

We sure can. Collaborate with Pfizer CentreOne. And access Pfizer science and product development expertise.

Listening. Solving. Guiding.

Welcome to Pfizer CentreOne. We have a global network ready to deliver end-to-end analytical and manufacturing expertise. Collaborating with you, we can help take your molecule all the way from early clinical phases through commercial manufacture and lifecycle management.

We leverage our development and tech transfer expertise to help bring your product to market as quickly as possible

Worldwide, our sites have been developing and manufacturing Pfizer's broad array of innovative molecules for decades, and this legacy helps ensure a successful collaboration with you.

We offer an expert suite of development and optimization services

Our offerings include formulation, clinical drug manufacturing, analytical testing, validation and method development. Access our wide-range of capabilities to support today's therapeutic trends:

Small Molecule APIs

- Analytical Development & Validation
- Route Selection
- Process Development & Scale Up
- Lab Scale & More
- Organic Synthesis, Fermentation, Purification, Particle Sizing

Oral Solids

- Early stage formulation development
- Process validation & optimization
- Full development of analytical methods
- Scale-up from lab to pilot to commercial
- Specification development
- Regulatory support – pre and post-launch
- Clinical manufacturing Ph I - III
- Full range of OEL 1-5 engineering controls from 10,000 to 0.01 $\mu\text{g}/\text{m}^3$
- Tablets, Capsules, Granules
- Controlled Substances

Large Molecule Biologics

- Process Development (Upstream, Downstream, Conjugation)
- Analytical Development & Validation
- Process Characterization
- Lab & Pilot Scale Manufacturing
- Vaccines & Monoclonal Antibodies

Sterile Injectables

- Formulation Development
- Analytical Development & Validation
- Process Development & Scale Up
- Lab & Pilot Scale Manufacturing
- Lyophilization Cycle Development & Optimization
- Terminal & Aseptic Sterilization
- Vials, Ampoules, Prefilled Syringes
- Controlled Substances & OEL 1-5
