Progesterone

Pfizer CentreOne's green-chemistry  
progesterone API

Wait. What? I can get green-chemistry progesterone API from Pfizer?

Yes, you can. Collaborate with Pfizer CentreOne. And access Enviro progesterone developed with Pfizer's technology that minimizes environmental impact.

## Intelligent Collaboration with Pfizer CentreOne.

Enviro progesterone is the first compound launched from Pfizer CentreOne's Enviro green-chemistry program and is being adopted across Pfizer providing the latest in lower environmental impact products for patients around the world.

### First-of-its-kind progesterone synthesis reduces impact to the environment

- More than 70% reduction in carbon footprint versus our traditional process
- No metal catalysts

### Validated process

Enviro progesterone has been used by Pfizer as an intermediate in the manufacture of its own medications for the past six years, with more than 580 metric tons produced to date.

## A reliable supply of high-quality progesterone for your medicines

We manufacture Enviro progesterone "from scratch" in the United States at our Kalamazoo, Michigan facility. With all processing steps in-house, your supply chain is condensed and your commercial supply, secure. Pfizer continually invests in the site – \$1B in the last 10 years alone – to improve infrastructure and processes. And like all our APIs, Enviro progesterone is produced under Pfizer's stringent quality management system, backed by technical and regulatory support for the life of your compound.

### A step change in progesterone API manufacturing

Developed over 12 years, our technology transforms the way progesterone is produced to reduce the impact of its manufacture on the environment. Based on plant sterols, our proprietary biocatalytic process eliminates metal catalysts and reduces waste, greenhouse gas emissions and use of hazardous solvents.

Let's  
collaborate
